Description:

The turbidity probe model TURBImat-HC uses the principle of light absorption to detect dissolved or suspended particles in liquids. The basic probe is 230mm long and will be immersed into the measured product.

Extension tubes allow the installation to pipes as well as the immersion in tanks or open channels. Pipe installation is typically done by using a 2" ball valve or a mounting flange at the probe shaft.

The sensor requires the transmitter model Messenger or CCAb and is suitable for the measuring of high concentrations in liquids. The calibration depends by application, measuring range and unit.

Applications:

- Product concentration
- Sedimentation
- Flotation
- Sludge concentration

Operational areas:

- Chemical industry
- Petrochemical industry
- Pulp & Paper
- Power plants & Waste water
